Combined Sewer Overflows Tackling the problem

In wet weather, surface runoff

A combined sewer system

Adapting to our changing climate

Infiltration reduction Structural integrity checks, sewer Monitoring and control to optimise Increasing network capacity. relining and sewer replacement capacity of network. Key **Removing/slowing run-off** Improving the network Surface water attenuation Surface water separation/removal Sustainable drainage systems Discharging rainfall to rivers via (SuDS) including rain gardens filter beds and the use of soakaways. and swales.

Southern Water.
